Taking care of the animals you love

LAVET Pharmaceuticals Ltd. established in 1991, is a privately owned Hungarian company, specializing in the development, manufacture and marketing of a broad range of pharmaceuticals for veterinary use. Our fundamental principle is to supply superior quality products at a fair price, without ever losing the sense of responsibility which is indispensable for any company that engages in pharmaceutical production.

The company slogan, "You Love We Care", on the practical, day-to-day level means that Lavet is always with their customers, assisting them in their efforts to keep their animals happy and healthy. Looking at the animals the same way the customers do we offer comprehensive solutions for the most common problems and needs. The customers only have to choose the right solution, and love their animals.

In keeping with our slogan, we continuously invest in research and development, production facilities, and our employees. LAVET is committed to providing an environment that empowers individuals to realize their potential and to achieve personal and professional goals.

Market-oriented, up-to-date, dynamic and competent are some of the key words that describe LAVET's current strategy. LAVET operates in a market that demands a constant high level of performance and the ability to adapt - both in terms of our organization and in terms of our product range.

With the strong teamwork spirit and flexibility that characterize LAVET, our company is in a position to work closely with its customers in order to offer solutions for their needs and provide them with the best possible service. Our top priorities are to utilise the latest scientific results and technological advances in our research & development and to adjust our facilities to the continuously rising quality standards required from a health products' manufacturer. This is what makes us confident that LAVET will continue to occupy a strongly competitive position in the market of the veterinary medicinal products.

RESEARCH BASE
STANDARDS

STRONG
HIGH QUALITY

LAVET is dedicated to discovering, developing and marketing innovative veterinary medicinal products in order to keep animals and people healthy by providing cost-effective, safe and high-quality health care products and services. This is the mission of LAVET and the guiding force behind who we are and what we do.

LAVET pays extreme attention to research and development. Our R&D work is focused on the development of added value generics or supergenerics with improved bioavailability, palatability and patient compliance. Over the years, this has led to a broad spectrum of innovative, safe and highly effective products.

In our research work, we also take our responsibility towards the human health and the environment very seriously. We all want to eat healthy food. It is therefore essential that the animals providing this food should be disease-free. Our pharmaceuticals and vitamin/mineral formulations offer effective means to keep farm animals healthy, ensuring food safety. On the other hand, it is also essential to avoid any hazards to the consumers caused by residues of drugs in foods of animal origin. All LAVET pharmaceuticals are rapidly biodegradable and undergo exhaustive residue testing to ensure that they meet the most stringent safety requirements.

All Lavet products are manufactured by scientifically certified, stringent standards of quality. Our production plant and maintains an excellent regulatory, Good Manufacturing Practice (GMP) compliance record. The basis of the high-quality production is the superior technical level and our well-trained working team.

All of our products are rigorously checked and tested at all stages of production to ensure top quality. We know how important it is for you to get the best.

Our commitment to the animal health market has never been stronger. LAVET is dedicated to remaining a product development organization through its own efforts. As a consequence, we can ensure a constant flow of new innovative products for a broad range of disease categories.

“Our endeavour is to provide high-quality, safe and efficacious medicines for treatment of life threatening diseases of farm animals and pets.”

Our products are on the market of more than 30 countries including the most important European markets like Germany, France and the United Kingdom. The strength and vitality of our industry is of key importance for us. We believe in our responsibility to invest in our customer's future success.

“Our aim is to be one of Europe's leading integrated pharmaceutical company, with core competencies in veterinary health care and agriculture.”

FOR PETS
